

# How Sun4All works

At each of the four pilot locations (Almada, Barcelona, Coeur de Savoie and Rome), eligible households are invited to participate in the Sun4All project. Participants will receive advice on energy management and low-cost energy efficiency measures at home. Additionally, participants will get the chance to benefit through the innovative Sun4All financial support scheme, which is based on local renewable energy production. This is how the Sun4All financial support scheme works:

Solar energy is generated by local photovoltaic installations, owned by the municipality and located near to where eligible participants live.

Depending on the pilot use case, the renewable solar energy is either provided for direct consumption by Sun4All beneficiaries or fed into the local power grid.

Sun4All beneficiaries continue to get electricity as usual, with no need to install or maintain solar panels.

Through the financial support scheme and its redistribution mechanism, Sun4All participants financially benefit from the renewable energy produced and its value.

The Sun4All project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement no. 101032239.
